The Modular Wetland System - Linear® standard 22' long system will require 18 to 20 plants. Different size systems will require different plant quantities; please contact us for detailed information.

The plants listed are tolerant to drought and have deep roots to allow for enhanced pollutant removal.

These plants are subject to availability in local areas. If you would like to use a different plant please contact us. We will work with you to ensure the chosen plants work with the projects current landscape theme.

The Modular Wetland System - Linear® should be irrigated like any other planter area. The plants in the system must receive adequate irrigation to ensure plant survival during periods of drier weather. As with all landscape areas the plants within the Modular Wetland System - Linear will require more frequent watering during the establishment period.
